HOW TO PLAY

ANSWERS

Fill every row, column, and 3×3 box with the digits 1–9. Each digit may appear only once per row, column, and box.

- 1 Pre-filled numbers are fixed clues, so leave them as they are.
- 2 Pick a row, column, or box with the fewest empty cells and work from there.
- 3 For each empty cell, list which digits are already in its row, column, and box, then eliminate until one remains.
- 4 When a digit can only go in one cell within a row, column, or box, place it there.
- 5 Repeat until the grid is complete.

*Write small candidate digits lightly in a corner of each empty cell. Cross them out as you eliminate options.*

Find one continuous path from the start opening to the finish opening without crossing any walls. This applies to all maze shapes.

- 1 Locate the two border openings (start and finish) for the current maze shape.
- 2 Begin at either opening and trace through open corridors only.
- 3 At each junction, choose one branch and continue until blocked or complete.
- 4 Mark dead ends with a small cross so you do not revisit them.
- 5 Backtrack when needed and continue until you connect both openings.

*Solve from both ends at once: draw short paths from each opening and look for where they can meet.*

Locate every word from the list hidden inside the letter grid. Words may run horizontally, vertically, or diagonally, forwards or backwards.

- 1 Pick a word from the list and find its first letter anywhere in the grid.
- 2 Check all eight directions from that cell for the next letter.
- 3 When a full match is found, draw a line through it with your stylus.
- 4 Cross the word off the list so you know it is done.
- 5 Repeat until every word is found.

*Tackle short words first — they are easier to spot and their letters may help you locate longer words nearby.*

Fill cells to reveal the hidden picture. Numbers above columns and beside rows tell you how many consecutive filled cells belong in each line.

- 1 Read the clues: start with rows or columns that have large numbers, or lines where clues nearly fill the full length.
- 2 Mark X for empty cells: whenever a cell cannot be filled, mark it immediately so that line becomes easier to solve.
- 3 Combine and deduce: use confirmed filled cells and X marks to solve crossing lines, then repeat this process across the grid.

 *Treat each clue as one continuous block. If a line has multiple clues, those blocks stay in order and must have at least one empty cell between them.*
